

## Michigan Engineers speeds up work reports using Bizframe Mobile Inspector

### Customer Profile

**Region:** Delhi, INDIA  
**Industry:** Urban Infrastructure  
**Website:** www.michiganeng.com

Michigan Engineers is a Mumbai based urban infrastructure company specialized in trenchless technology, micro tunneling and sewerage systems.

### Business Challenge

Work at MEPL is a tough one with most of the activities being executed underground, which requires careful plan, execution and strict adherence to Quality norms as per respective client.

Michigan engineers needed a reporting system at its project in Delhi that could keep pace with the site progress and avoid the difficulties associated with a fixed site office for reporting.

### Bizframe Solution

Bizframe Mobile Inspector suited MEPL's need for an agile reporting system that could be used effectively on rapidly changing project sites.

The mobile forms for MEPL, capture the project location, work being executed and exact progress of work underway with detailed images.

Within minutes of the reports being sent, the management gets a detailed, compiled report as a PDF document complete with all images and site information.

This cuts down the turn around time for several common occurrences such as material quality inspection and expedites the entire decision making process at the office.

Over all, a wonderful mobile tool for saving time and travel while enabling instant Reports.

Mobile Inspector Packs in more punch than many ERPS do for field reports.

**“It is a good MIS Tool for the organizations having various activities at multiple locations.”**

Pradeep Mewar, Head – Projects, Michigan Engineers

### Technical Details

Mobile Inspector is a ready to use solution that works on handheld mobile devices / smartphones and enables them for capture of field reports and images, while providing instant and automated report generation and mailer facilities.
